

4 Key insights we've learned in 30 years of DINGO

1 We empower customers to go beyond base level reporting.

We have become an integral cog in the maintenance wheel that goes full circle from problem prediction, to implementation, to re-reporting execution outcomes. This cycle continually feeds the system with data to make real time decisions about the health of an asset.

2 Data is valuable.

The key to business at this scale is data. What are the parameters of the data, where it is stored, who needs it and who can interpret it?

The data is key to this end-to-end solution that drives us, and more importantly our customers, forward.

3 Integration is essential to building relationships.

Systems are one of the biggest expenses in our clients' businesses. We integrate with every system to provide solutions without re-inventing the operations and reporting wheel.

4 We are solution focused.

There are no problems, just technology driven solutions waiting to be developed. We create partnerships where we work together with our clients towards a common goal. When a client has a challenge, we are ready to walk that path with them, and create a solution.

Our products can be tracked back

to a customer's problem; we have created a platform of solutions.

These four key insights have helped us support our customers to turn their maintenance departments from chaos into an orderly, sustainable, and scalable process that saves them time and money.

Let's journey through our customers eyes to show you how easy it can be to achieve a healthy digital mine.
